## 'HAIRCUT COMPARED TO AMOUNT DUE, BUT BONUS COMPARED TO LIQUIDATION VALUE'

The new Insolvency and Bankruptcy Code has the potential to reduce inci-dences of bad debt across dences of bad debt across the country, as the fear of losing control of compa-nies will force promoters to operate efficiently and avoid defaults. Further, it encourages debtors to set-tle default with the credi-tors at the ordigat, prefer tors at the earliest, prefer-ably outside the Code, says M S Sahoo, Chairperson, Insolvency and Bankruptcy Board of India, in an exclusive interview to Ashwin J Board Punnen Chronicle. of Financial

According to Sahoo, the resolution plans have yielded about 200 per cent yielded about 200 per cent of liquidation value for creditors. They are realis-ing on an average 43 per cent of their claims through resolution plans under a process which takes on an average 300 days and entable an avera takes on an average 300 days and entails an average cost of 0.5 per cent, a far cry from the previous regime which yielded a recovery of 25 per cent for creditors through a process which took about more than five years and more than five years and entailed a cost of 9 per

## ■ Insolvency and Bankruptcy Code has been in operation for over a year. How do you rate the performance?

I rate it 10 on 10 by considering the fact that India did not have any prior experience of an insolvency law that is proactive, incentive-compliant, mar-

ket-led and time-bound Many institutions required for implementa-tion of a modern and robust insolvency regime did not exist. As you know it takes time to build insti tutional capacity and develop the markets and practices to implement the reform. Despite this, the provisions relating to corporate insolvency came into force within 60 days of the establishment of the IBBI. This is a feat in itself.

Today, the entire insolvency ecosystem is available. We have presence of Adjudicating Authority in a dozen cities. The Appellate Authority, the IBBI, 2,500 insolvency professionals, three insolvenlessionals, three insolven-cy professional agencies. 50 insolvency professional entities, one Information Utility, 1,800 registered val-uers and 11 registered val-uer organisations are all in place

Debtors and creditors alike are undertaking cor-porate insolvency processes. About 2,000 firms, some of them having very large non-performing assets, have been admitted into corporate insolvency resolution process. One-third of them have exited the process with resolution plans, withdrawals or orders for liquidation. Another 500 firms have commenced voluntary liq-

uidation.
And the resolution plans have yielded about 200 per cent of liquidation value for creditors. They are realising on an average 43 per cent of their claims through resolutions plans under a process which takes on average 300 days and entails a cost on average of 0.5 per cent, a far cry from the previous regime which yielded a

recovery of 25 per cent for recovery of 25 per cent for creditors through a process which took about more than five years and entailed a cost of 9 per cent. It is important to note that this realisation is only a bi-product of rescuonly a bi-product of rescu-ing failing firms. Of all these, the most important outcome is that the Code has redefined the debtorcreditor relationship, lead-ing to significant behav-ioural changes resulting in substantial recoveries for creditors outside the Code and improving per-formance of firms.

■ What are the major issues that need to be addressed for faster reso-

audressed for laster resolution of the cases?
Whenever any major reform is envisaged, particularly when it substantially affects the rights and obligations of the stakeholders as the Code does,

there is a usual apprehen-sion about, as well as reluc-tance to accept, the change and, at times, vigorous efforts, often through court process, are made to cling on to the old order. The only issue that needs to be addressed is the change in the mindset that accepts the reality and allows the market forces to play out and accept the market out-comes. The promoters, firms, creditors, resolution and the limbs of state hav-ing interface with the processes need to act fully in consonance with spirit of the Code. For example, financial creditors, must financial creditors must financial creditors must fully accept that the Code is not a mechanism for recovery, but for resolution of insolvency. The use of technology in processes, development of best prac-tices, improved capacity of the ecosystem, additional members in the members in the Adjudicating Authority, etc. would, of course, facil-itate expeditious conclusion of processes under the Code.

■ How far the process has helped to resolve the NPA crisis in the country?

'Resolution' under the Code is remedial. It has also the potential to prevent growth of NPA in an account as a bank is entitled to invoke the Code at the earliest instance of default. For dealing with the existing NPAs, a bank has two broad choices, resolution and recovery. It may choose between the

two, but it cannot choose resolution to recover NPA. It has quite a few choices under the recovery menu; under the recovery menu; so also, under resolution menu. Thus, it depends on the choice of a bank. Resolution under the Code addresses stress on the balance sheets of the firm and of the bank simultaneously. Banks berg registed epicentical.

simultaneously. Banks have realised substantial amount of outstanding NPAs through resolution plans under the Code and upgradation of accounts and recovery in the shad-ow of the Code. In fact, the gross NPA has started gross NP declining.

## There is criticism that lenders have to take huge haircuts. Do you agree with that?

Yes, it is a haircut as com-pared to the amount due from the debtor. But, it is a bonus as compared to liquidation value of the firm. Take an example. A firm owes Rs1,000 to a bank. It has assets the liquidation value of which is Rs10. Resolution plan yields Rs100 for the bank. In this example, the bank gets 10 per cent of its due, that is, a haircut of 90 per cent. Will market give the bank Rs1.000 when the firm has liquidation value of Rs10?

Do you think ligations are delaying the resolution process. We have seen in some cases promoters moving court, in other creditors squabbling even after CoC giving the approval. How do you

think this problem can be resolved to complete the resolution process faster? A law of such significance

takes years to settle down. We have passed through two major phases of eco-nomic reforms. The laws supporting such reforms such as the securities law and competition law have encountered legal chal-lenges for many years, even though these laws had a long history in India. The challenges continue even today. This is not unusual given that the laws related to economic freedom are of recent ori-gin and fundamental principles are yet to be settled What is satisfying is that the emerging legal chal-lenges are getting settled at a faster pace and once a challenge is settled, it rests for a longer period.

## How you see the Code emerging as a tool to resolve the bad debt in the country? The credible threat of a res-

olution process, that the control and management of the firm may move away from existing promoters and managers, most proba-bly, forever, deters the management and promoters of the firm from operating below the optimum level of efficiency and motivates them to make the best efforts to avoid default. Furorts to avoid default. Fur-ther, it encourages debtors to settle default with the creditors at the earliest, preferably outside the Code. This would reduce incidence of bad debt.
